TEST 1

Sem & AY: Odd Sem 2019-20

Date: 01.10.2019

Course Code: CSE 214

Time: 2.30 to 3.30 PM

Course Name: PRINCIPLES OF PROGRAMMING LANGUAGES

Max Marks: 40

Program & Sem: B.Tech (CSE) & V

Weightage: 20%

Instructions:

- (i) Read the question properly and answer accordingly.
 - (ii) Question paper consists of 3 parts.
-

Part A [Memory Recall Questions]

Answer both the Questions. Each Question carries five marks. (2Qx5M=10M)

1. Ramesh wants to create a software in the area of system programming. He chosen a particular language for implementing that software. But the language is not suited for implementing that software. List and explain the advantages for learning different programming languages to solve the above problem.

(C.O.NO.1) [Knowledge]

2. List and explain the various programming domains.

(C.O.NO.1) [Knowledge]

Part B [Thought Provoking Questions]

Answer both the Questions. Each Question carries five marks. (2Qx5M=10M)

3. Consider the following grammar

(C.O.NO.1) [Comprehension]

$E \rightarrow E-E \mid E+E$

$E \rightarrow E/E \mid E^*E$

$E \rightarrow (E)$

$E \rightarrow id$

- i. Check whether the above grammar is ambiguous or unambiguous.
- ii. Translate the above grammar in to an unambiguous grammar

4. Consider the following declaration of a two-dimensional array in C:

```
float a[10][20];
```

Assuming that the main memory is byte-addressable and that the array is stored starting from memory address 1000, predict the address of a[4][5].

(C.O.NO.2) [Comprehension]

Part C [Problem Solving Questions]

Answer both the Questions. Each Question carries ten marks. (2Qx10M=20M)

5. Consider the grammar of a Programming Language: The non-terminals are enclosed within <NT> brackets, others are terminals, and <program > is the starting symbol.

The Productions rules are given below. (C.O.NO.1) [Comprehension]

```
<program> → begin <stmt_list> end
```

```
<stmt_list> → <stmt>
```

```
          | <stmt> ; <stmt_list>
```

```
<stmt> → <var> = <expression>
```

```
<var> → A | B | C
```

```
<expression> → <var> * <var>
```

```
              | <var> / <var>
```

```
              | <var>
```

Consider the following program. Prove that the program belongs to the grammar.
Hint: Show the derivation.

```
begin A = B * C ; B = C end
```

6. Translate the following statement into Target Code. Assume all variables are float type

```
res=a*b+c*120
```

(C.O.NO.1) [Application]

TEST – 2

Sem & AY: Odd Sem 2019-20

Course Code: CSE 214

Course Name: PRINCIPLES OF PROGRAMMING LANGUAGES

Program & Sem: B.Tech (CSE) & V

Date: 19.11.2019

Time: 2.30 PM TO 3.30 PM

Max Marks: 40

Weightage: 20%

Instructions:

(i) *Answer All the Questions*

Part A [Memory Recall Questions]

Answer both the Questions. Each Question carries five marks. (2Qx5M=10M)

1. Define Array. Let A denote an integer array of size 20, and let c and i be integers. Assuming that the width of an integer is 4. Generate three address code for expression $c + A[i]$? [5M](C.O-2) [BL -Knowledge]
2. Define record. Create an Employee record with fields EmpId, EmpName (FirstName, MiddleName, LastName), Hourly-Rate in COBOL. Explain how to access a field in COBOL? [5M](C.O-2) [BL -Knowledge]

Part B [Thought Provoking Questions]

Answer both the Questions. Each Question carries ten marks. (2Qx10M=20M)

3. Explain the classification of variables according to their Lifetime. Consider the following program and classify the variables in the Program according to their Lifetime?

```
static int a;
int b;
int fun(int c)
{
    static int x = 0;
    int y[100];
    int *ptr = new (int);
    static char *p= {"G","A","T","E"};
}
```

[10M] (C.O-3) [BL-C Comprehension]

4. Define static scope, and dynamic scope. What will be the output of the following Program with static and dynamic scoping?

```
float x;
void show( )
{
printf("%f",x);
}
void print( )
{
float x;
x=1.25;
show( );
}
int main( )
{
x=2.5;
show( );
print( );
}
```

[10M] (C.O-3) [BL-Comprehension]

Part C [Problem Solving Questions]

Answer the Question. The Question carry ten marks.

(1Qx10M=10M)

5. Define call by value, call by value-result, and call by reference. What will be the output of the following program with call by value, call by value-result, and call by reference.

```
begin
integer x;
  procedure p(y: integer);
    begin
      x := x+1;
      y := y+4;
      print(x);
    end;
x := 0;
p(x);
print(x);
end;
```

END TERM FINAL EXAMINATION

Semester: Odd Semester: 2019 - 20

Date: 28 December 2019

Course Code: CSE 214

Time: 9.30 AM to 12.30 PM

Course Name: PRINCIPLES OF PROGRAMMING LANGUAGES

Max Marks: 80

Program & Sem: B.Tech (CSE) & V

Weightage: 40%

Instructions: Read the all questions carefully and answer accordingly.

Part A [Memory Recall Questions]

Answer all the Questions. Each Question carries 5 marks.

(4Qx5M=20M)

[Knowledge]

1. List the various language evaluation criteria's and the characteristics that affect them. (C.O.No.1)
2. List the various categories of arrays with an example. (C.O.No.2)
3. Consider the following assignment statement
a=a+5; Explain different possible binding times for the above statement. (C.O.No.3)
4. What is lazy Evaluation? Explain its advantages and disadvantages (C.O.No.4)

Part B [Thought Provoking Questions]

Answer all the Questions. Each Question carries 10 marks.

(3Qx10M=30M)

[Comprehension]

5. Explain the structure of compiler. Convert the following statement to assembly code.
position=initial+rate*60 (C.O.No.1)
6. Suppose you want to design arrays for your own imperative programming language. Illustrate how you will address the different design issues related to arrays. How it will be implemented? (C.O.No.2)
7. Explain the difference between static and dynamic scoping with an example. What will be the output of the following pseudo code when parameters are passed by reference and dynamic scoping used. (C.O.No.3)

```
a=3;
void n(x)
    {x=x*a;
    print(x);}
void m(y){
    a=1;
    a=y-a;
    n(a);
    print (a);}
void main()
    {m(a);}
```

Part C [Problem Solving Questions]

Answer all the Questions. Each Question carries 10 marks.

(3Qx10M=30M)
[Application]
(C.O.No.3)

8. Create Activation Records in Runtime memory for the following program?

```
void main()
{
int a,b,c;
c=sum(a,b);
print(c);
}
int sum(int m, int n)
{
int res;
res = m+f(n);
return(res);
}
int f(int p)
{
int i;
for(i=0;i<5;i++)
{
p= p+i;
}
return(p);}

```

9. Explain Deep and Shallow access. Draw the memory layout for the following program with shallow access? (C.O.No.3)

<pre>Fun2(int z) { int m=10; z=z-1 Fun1(m,z); } </pre>	<pre>Fun1(int x,int y) { if(y<=0) return(); else Fun2(y); } </pre>	<pre>main() { int a=5,b=2; Fun1(a,b) Fun2(0); } </pre>
--	---	--

10. Explain Lambda Calculus? Describe the Syntax of Lambda Calculus and evaluate the following expression using alpha and beta reduction rules? (C.O.No.4)

$$(\lambda x . (\lambda x . + (- x 1)) x 3) 9$$

10	<p>Lambda Calculus</p> <p>Function creation – Church introduced the notation $\lambda x.E$ to denote a function in which 'x' is a formal argument and 'E' is the functional body. These functions can be of without names and single arguments.</p> <p>Function application – Church used the notation $E_1.E_2$ to denote the application of function E_1 to actual argument E_2. And all the functions are on single argument</p> <p>Syntax of Lambda Calculus Lambda calculus includes three different types of expressions, i.e., $E ::= x$ (variables) $E_1 E_2$ (function application) $\lambda x.E$ (function creation)</p>	<p>Explanation 3M Syntax 3M Evaluation 4M</p>	20 min																								

Where $\lambda x.E$ is called Lambda abstraction and E is known as λ -expressions.

Alpha Reduction

Alpha reduction is very simple and it can be done without changing the meaning of a lambda expression.

$$\lambda x . (\lambda x . x) (+ 1 x) \leftrightarrow \alpha \lambda x . (\lambda y . y) (+ 1 x)$$

For example –

$$(\lambda x . (\lambda x . + (- x 1)) x 3) 9$$

$$(\lambda x . (\lambda y . + (- y 1)) x 3) 9$$

$$(\lambda y . + (- y 1)) 9 3$$

$$+ (- 9 1) 3$$

$$+ 8 3$$

$$11$$

β -reduction

When there are multiple terms, we can handle them as follows –

$$(\lambda x . (\lambda x . + (- x 1)) x 3) 9$$

The inner x belongs to the inner λ and the outer x belongs to the outer one.

$$(\lambda x . + (- x 1)) 9 3$$

$$+ (- 9 1) 3$$

$$+ 8 3$$

$$= 11$$
