Roll No.														
----------	--	--	--	--	--	--	--	--	--	--	--	--	--	--

End - Term Examinations – MAY 2025	
Date: 22 - 05- 2025	Time: 09:30 am –12:30 pm

School: SOCSE	Program: CSE (AI&ML)	
Course Code: CSE3122	Course Name: Pattern Recognition	
Semester: VI	Max Marks: 100	Weightage: 50%

CO - Levels	CO1	CO2	CO3	CO4	CO5
Marks	24	24	26	26	-

- Instructions:**
- (i) Read all questions carefully and answer accordingly.
 - (ii) Do not write anything on the question paper other than roll number.

Part A

Answer ALL the Questions. Each question carries 2marks. 10Q x 2M=20M

1.	Explain the key applications of pattern recognition.	2 Marks	L2	CO1
2.	Describe Feature vector of a pattern by considering an example	2 Marks	L2	CO1
3.	Identify the data structures used for representing the patterns.	2 Marks	L1	CO2
4.	List the advantages of using rough sets and fuzzy sets for pattern representation.	2 Marks	L1	CO2
5.	Explain the components of Bayesian Belief Networks.	2 Marks	L2	CO3
6.	List the issues of KNN classifier	2 Marks	L1	CO3
7.	Interpret the relation between joint probability and conditional probability	2 Marks	L2	CO3
8.	List the advantages and disadvantages of Hidden Markov’s model	2 Marks	L1	CO4
9.	Decision tree algorithm is a greedy algorithm, justify.	2 Marks	L2	CO4
10.	Explain an application of Hidden Markov’s model	2 Marks	L2	CO4

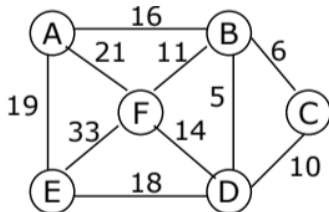

Part B

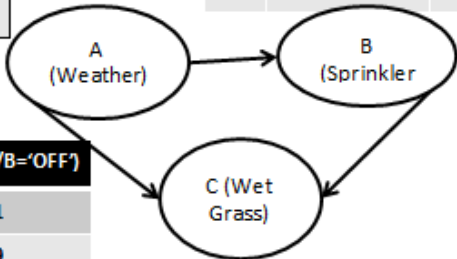

Answer the Questions.

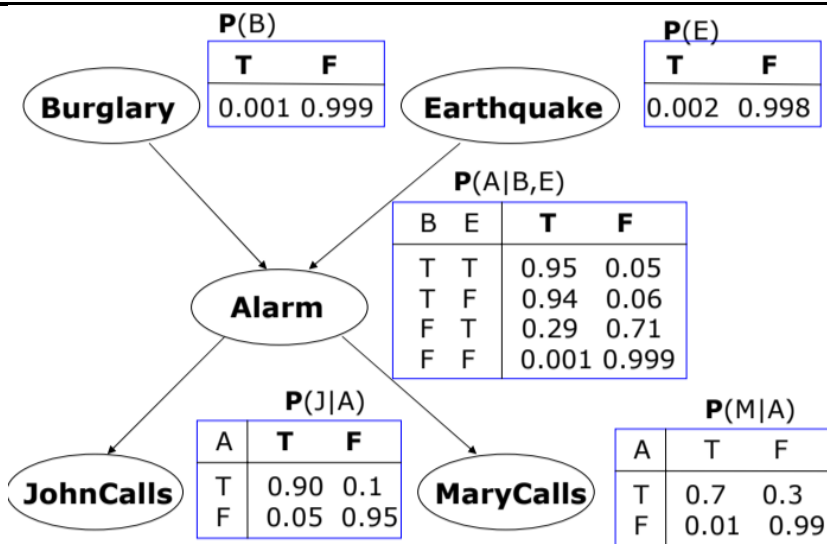

Total Marks 80M

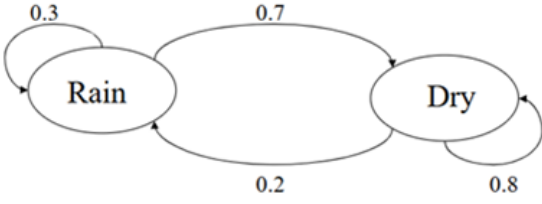

11.	a.	Describe joint probability and conditional probability. Explain the relation between joint probability and conditional probability with example.	6 Marks	L2	CO1																																			
	b.	<div>The joint distribution of $p(x, y)$ of X (number of cars) and Y (the number of buses) per signal cycle at a traffic signal is given by</div> <table><tr><td></td><td></td><td colspan="3">y</td></tr><tr><td>p(x,y)</td><td></td><td>0</td><td>1</td><td>2</td></tr><tr><td rowspan="6">x</td><td>0</td><td>0.025</td><td>0.015</td><td>0.010</td></tr><tr><td>1</td><td>0.050</td><td>0.030</td><td>0.020</td></tr><tr><td>2</td><td>0.125</td><td>0.075</td><td>0.050</td></tr><tr><td>3</td><td>0.150</td><td>0.090</td><td>0.060</td></tr><tr><td>4</td><td>0.100</td><td>0.060</td><td>0.040</td></tr><tr><td>5</td><td>0.050</td><td>0.030</td><td>0.020</td></tr></table> <div><div>i.</div><div>Find $P(X > Y)$.</div><div>ii.</div><div>Calculate the marginal distribution of X and Y.</div><div>iii.</div><div>Suppose a bus occupies two vehicle spaces and a car occupies just one. What is the mean number of vehicle spaces occupied during a signal cycles? Calculate the mean or expected value of $h(X, Y) = X + 2Y$.</div></div>			y			p(x,y)		0	1	2	x	0	0.025	0.015	0.010	1	0.050	0.030	0.020	2	0.125	0.075	0.050	3	0.150	0.090	0.060	4	0.100	0.060	0.040	5	0.050	0.030	0.020	7 marks	L3	CO1
		y																																						
p(x,y)		0	1	2																																				
x	0	0.025	0.015	0.010																																				
	1	0.050	0.030	0.020																																				
	2	0.125	0.075	0.050																																				
	3	0.150	0.090	0.060																																				
	4	0.100	0.060	0.040																																				
	5	0.050	0.030	0.020																																				
	c.	Use python code to print a number pyramid pattern and write the steps.	7 marks	L3	CO1																																			
OR																																								
12.	a.	<div>Explain the concept of conditional probability for two discrete random variables. Let X and Y are two random variables representing the number of heads observed in two coin tosses. The joint probability distribution $P(X,Y)$ is given below:</div> <table><tr><td>X\Y</td><td>0</td><td>1</td><td>2</td></tr><tr><td>0</td><td>0.1</td><td>0.2</td><td>0.1</td></tr><tr><td>1</td><td>0.2</td><td>0.3</td><td>0.1</td></tr><tr><td>2</td><td>0.1</td><td>0.1</td><td>0.1</td></tr></table> <div>Compute the conditional probability $P(X=1 Y=1)$.</div>	X\Y	0	1	2	0	0.1	0.2	0.1	1	0.2	0.3	0.1	2	0.1	0.1	0.1	6 Marks	L2	CO1																			
X\Y	0	1	2																																					
0	0.1	0.2	0.1																																					
1	0.2	0.3	0.1																																					
2	0.1	0.1	0.1																																					
	b.	A company makes phones. Out of 100 phones, one is faulty. For each phone, the company makes a profit of Rs 2,000 and a loss of Rs. 10,000 for the faulty phone. Calculate the expected profit.	7 marks	L3	CO1																																			
	c.	Implement a python code to print a kite pattern as output by considering $n=5$ and write the steps.	7 marks	L3	CO1																																			

13.	a.	Distinguish pattern and vector with suitable examples	6 Marks	L2	CO2
	b.	<p>Let's assume the following transactional database, with a minimum support threshold of 50% (i.e., item sets appearing in at least 3 transactions are considered frequent):</p> <p>Interpret the frequent pattern tree and list the frequent elements from the item list.</p>	7 marks	L3	CO2

		<table><tr><th>Transaction ID</th><th>Items</th></tr><tr><td>T1</td><td>{E,K,M,N,O,Y}</td></tr><tr><td>T2</td><td>{D,E,K,N,O,Y}</td></tr><tr><td>T3</td><td>{A,E,K,M}</td></tr><tr><td>T4</td><td>{C,K,M,U,Y}</td></tr><tr><td>T5</td><td>{C,E,I,K,O,O}</td></tr></table>	Transaction ID	Items	T1	{E,K,M,N,O,Y}	T2	{D,E,K,N,O,Y}	T3	{A,E,K,M}	T4	{C,K,M,U,Y}	T5	{C,E,I,K,O,O}			
Transaction ID	Items																
T1	{E,K,M,N,O,Y}																
T2	{D,E,K,N,O,Y}																
T3	{A,E,K,M}																
T4	{C,K,M,U,Y}																
T5	{C,E,I,K,O,O}																
	c.	Implement the Gaussian distribution curve by considering the linear data values and visualize the results. (Hint: np.random.randint() for generating data values)	7 marks	L3	CO2												
OR																	
14.	a.	Describe the different proximity measures in pattern recognition.	6 Marks	L2	CO2												
	b.	Consider the following undirected weighted graph:  Illustrate the minimum spanning tree for the given graph and write the steps.	7 marks	L3	CO2												
	c.	Implement linear perceptron learning for synthetic data and visualize the accuracy of the model. (Hint: Use make_blob() function for generating synthetic data)	7 marks	L3	CO2												

15.	a.	Explain Nearest Neighbour (NN) algorithm for classification. List advantages and disadvantages of KNN	6 Marks	L2	CO3																								
	b.	Implement KNN algorithm from the scratch (without using built-in function). Write the steps.	7 marks	L3	CO3																								
	c.	<table><tr><th>A</th><th>P(A)</th></tr><tr><td>Sunny</td><td>0.7</td></tr><tr><td>Rainy</td><td>0.3</td></tr></table> <table><tr><th>B</th><th>P(B/A='Sunny')</th><th>P(B/A='Rainy')</th></tr><tr><td>ON</td><td>0.8</td><td>0.01</td></tr><tr><td>OFF</td><td>0.2</td><td>0.99</td></tr></table> <table><tr><th>C</th><th>P(C/B='ON')</th><th>P(C/B='OFF')</th></tr><tr><td>YES</td><td>0.9</td><td>0.01</td></tr><tr><td>NO</td><td>0.1</td><td>0.99</td></tr></table>  For the above conditional probabilities, calculate the probability of wet grass	A	P(A)	Sunny	0.7	Rainy	0.3	B	P(B/A='Sunny')	P(B/A='Rainy')	ON	0.8	0.01	OFF	0.2	0.99	C	P(C/B='ON')	P(C/B='OFF')	YES	0.9	0.01	NO	0.1	0.99	7 marks	L3	CO3
