   (CO1) [Comprehension]

7. A. Prepare a chart on the components of Administrative Management Systems. 5M

B. Explain the Components of Financial Information System. 5M

(CO2) [Comprehension]

PART C

ANSWER THE FOLLOWING QUESTION   **(1 X 20 = 20M)**

8. At a restaurant, a new information system is installed to improve the performance of the main business activities. The system includes a main server holding the restaurant management application for sales and accounting. A back office computer is used by the manager and handled devices, connected through WIFI technology to the server, are used by the waiters. Waiters take the order on their handled device, equipped with a point of sale software and touch screen to take the order as fast and accurate as possible. Once taken, the order is printed out directly in the kitchen and recorded in the accounting system. When closing a table, the waiter can automatically print the invoice on one of the three printers existing in the restaurant main floor. With this new system the customers are better served by delivering their orders and preparing the invoice quickly and with the minimum possibility of mistakes. At the end of the day, the manager can print out a detailed report of all the invoices with the necessary details of the items ordered, the amount collected from customers, and a list of the purchases to be made according to the sales.

(CO1) [Application]
